SAFETY DATA SHEET

1. IDENTIFICATION

Product identifier
Product Name Phenol / Methanol 90/10%

Other means of identification
Product Code 6100
UN/ID no. UN1992
Synonyms Phenol: phenol, CVD; Carbolic acid; phenic acid; phenylic acid; hydroxybenzene; monohydroxybenzene/ Methanol: Methyl alcohol, wood alcohol; carbinol

Recommended use of the chemical and restrictions on use
Recommended Use Laboratory chemicals.
Uses advised against No information available

Details of the supplier of the safety data sheet
Manufacturer Address Harrell Industries, Inc.
2495 Commerce Drive
Rock Hill, SC 29730

www.harrellindustries.com

Emergency telephone number
Company Phone Number 803-327-6335
Fax Number 803-327-7808
24 Hour Emergency Phone Number 800 633-8253 (PERS)

2. HAZARDS IDENTIFICATION

Classification
OSHA Regulatory Status This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Label elements

Emergency Overview

Danger

Hazard statements
Toxic if swallowed
Toxic in contact with skin
Toxic if inhaled
Causes severe skin burns and eye damage
Suspected of causing genetic defects
May cause damage to organs through prolonged or repeated exposure
Phenol: Poison! Danger! May be fatal if swallowed, inhaled, or absorbed through skin. Rapidly absorbed through skin. Corrosive. Causes severe burns to every area of contact. Affects central nervous system, liver and kidneys. Combustible liquid and vapor.

Methanol: Poison! Danger! Vapor harmful. May be fatal or cause blindness if swallowed. Harmful if inhaled or absorbed through skin. Cannot be made nonpoisonous. Flammable liquid and vapor. Causes irritation to skin, eyes and respiratory tract. Affects central nervous system and liver.

**Appearance** Colorless to light pink liquid

**Physical state** liquid

**Odor** sharp, medicinal, sweet, tarry

---

**Precautionary Statements - Prevention**

Obtain special instructions before use

Do not handle until all safety precautions have been read and understood

Use personal protective equipment as required

Wash face, hands and any exposed skin thoroughly after handling

Do not eat, drink or smoke when using this product

Use only outdoors or in a well-ventilated area

Do not breathe dust

---

**Precautionary Statements - Response**

Immediately call a POISON CENTER or doctor/physician

Phenol: Corrosive. Eye burns with redness and pain, blurred vision may occur. May cause severe damage and blindness.

Methanol: Irritant. Continued exposure may cause eye lesions.

Phenol: Corrosive. Rapidly absorbed through the skin with systematic poisoning effects to follow. Discoloration and severe burns may occur, but may be disguised by a loss in pain sensation. Methanol: Methyl alcohol is a defatting agent and may cause skin to become dry and cracked. Skin absorption can occur; symptoms may parallel inhalation exposure.

Phenol: Breathing vapor, dust or mist results in digestive disturbances (vomiting, difficulty in swallowing, diarrhea, loss of appetite). Will irritate, possibly burn, respiratory tract. Other symptoms listed under ingestion may also occur. Methanol: A slight irritant to the mucous membranes. Toxic effects exerted upon nervous system, particularly the optic nerve. Once absorbed into the body, it is very slowly eliminated. Symptoms of overexposure may include headache, drowsiness, nausea, vomiting, blurred vision, blindness, coma, and death. A person may get better but then worse again up to 30 hours later.

Phenol: Poison. Symptoms may include burning pain in mouth and throat, abdominal pain, nausea, vomiting, headache, dizziness, muscular weakness, central nervous system effects, increase in heart rate, irregular breathing, coma, and possibly death. Acute exposure is also associated with kidney and liver damage. Ingestion of 1 gram has been lethal to humans. Methanol: Toxic. Symptoms parallel inhalation. Can intoxicate and cause blindness. Usual fatal dose: 100-125 milliliters.

---

**Precautionary Statements - Storage**

Store locked up

Store in a well-ventilated place. Keep container tightly closed

---

**Precautionary Statements - Disposal**

Dispose of contents/container to an approved waste disposal plant

---

**Hazards not otherwise classified (HNOC)**

Not applicable

---

**Other Information**

Harmful to aquatic life with long lasting effects Toxic to aquatic life

---

**3. COMPOSITION/INFORMATION ON INGREDIENTS**

<table>
<thead>
<tr>

<th>Synonyms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phenol, CVD; Carbolic acid; phenic acid; phenylic acid; hydroxybenzene;</td>
<td></td>
</tr>
</tbody>
</table>
**4. FIRST AID MEASURES**

**Description of first aid measures**

**Eye contact**
Rinse thoroughly with plenty of water for at least 15 minutes, lifting lower and upper eyelids. Consult a physician if irritation occurs.

**Skin contact**
Remove contaminated clothing and shoes. As soon as possible, repeatedly apply polyethylene glycol to affected area. Destroy contaminated clothing and shoes. Flush skin with water for at least 30 minutes. It is very important to avoid rubbing or wiping affected parts which would aggravate irritation and cause product dispersion. Continue treatment until the burned area changes color from white to pink. Expect that this can take a long period of time (20 minutes or more). The polyethylene glycol application should be done during transportation to the hospital. If polyethylene glycol is not available, flush with water for at least 30 minutes prior to going to hospital. Get medical attention immediately.

**Inhalation**
Remove to fresh air. If not breathing give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Ingestion**
Phenol: If swallowed, immediately administer castor oil or other vegetable oil. Never give anything by mouth to an unconscious person. Be ready to induce vomiting at the advice of a physician or poison control center. Castor oil (or vegetable oil) dosage should be between 15 and 30 cc. Get medical attention immediately. Methanol: Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

**Most important symptoms and effects, both acute and delayed**

**Symptoms**
Chronic: Phenol: repeated exposure may cause symptoms described for acute poisoning as well as eye and skin discoloration. Methanol: Marked impairment of vision has been reported. Reported or prolonged exposure may cause skin irritation.

**Indication of any immediate medical attention and special treatment needed**

**Note to physicians**
Treat phenol ingestion with gastric lavage using 40% aqueous Bacto-Peptone milk or water until phenolic odor is eliminated. Then give 15 to 50 cc castor or vegetable oil. Debride necrotic skin. Monitor vital signs, fluid status, electrolytes, BUN, renal and hepatic function, and electrocardiogram. Manage sedation, seizures renal failure, and fluid electrolyte imbalances symptomatically as indicated. In case of phenol poisoning, start first aid immediately, then get medical attention. People administering first aid should take precautions to avoid contact with phenol. A phenol antidote kit (castor oil or other vegetable oil, polyethylene glycol 300) should be available in any phenol work area. Actions to be taken in case of phenol poisoning should be planned and practiced before beginning work with phenol. Castor oil and or polyethylene glycol can be given by a first aid responder before medical help arrives.

**5. FIRE-FIGHTING MEASURES**

**Suitable extinguishing media**
Use extinguishing measures that are appropriate to local circumstances and the surrounding environment. Phenol: water spray, dry chemical, alcohol foam, or carbon dioxide. Water spray may be used to keep fire exposed containers cool. Methanol: Use alcohol foam, dry chemical, or carbon dioxide. (water may be ineffective).

**Unsuitable extinguishing media**
Caution: Use of water spray when fighting fire may be inefficient.
Specific hazards arising from the chemical
Phenol: Above flash point, vapor-air mixtures are explosive within flammable limits noted above. Sealed containers may rupture when heated. Methanol: Above flash point, vapor-air mixtures are explosive within flammable limits noted above. Moderate explosion hazard and dangerous fire hazard when exposed to heat, sparks or flames. Sensitive to static discharge.

Explosion data
Sensitivity to Mechanical Impact None.
Sensitivity to Static Discharge Sensitive.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear. Structural firefighter's protective clothing is ineffective for fires involving this material. Stay away from sealed containers. Note for methanol component: Use water spray to blanket fire, cool fire exposed containers, and to flush non-ignited spills or vapors away from fire. Vapors can flow along surfaces to distant ignition source and flash back.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures
Personal precautions Ventilate area of leak or spill. Keep unnecessary and unprotected people away from area of spill. Wear appropriate personal equipment.

Environmental precautions
Environmental precautions See Section 12 for additional ecological information.

Methods and material for containment and cleaning up
Methods for containment Contain and recover liquid when possible. Collect liquid in an appropriate container or absorb and place into a chemical waste container.

Methods for cleaning up Absorb with inert materials (e.g., vermiculite, dry sand, earth). Do not use combustible materials, such as saw dust. Do not flush to sewer!! Dry lime or soda ash may be used to neutralize spills.

7. HANDLING AND STORAGE

Precautions for safe handling
Advice on safe handling Keep in a tightly closed container. Store in a cool, dry, ventilated area away from sources of heat or ignition. Protect against physical damage. Store separately from reactive or combustible materials and out of direct sunlight. Outside or detached storage is preferred. Separate from incompatibilities. Containers should be bonded or grounded for transfers to avoid static sparks. Storage and use areas should be no smoking areas. Use non-sparking type tools and equipment, including explosion proof ventilation. All phenol workers should be properly trained on its hazards and the proper protective measures required. This training should also include emergency actions. All phenol operations should be enclosed to eliminate any potential exposure routes. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); Observe all warnings and precautions listed for the product.

Conditions for safe storage, including any incompatibilities
Storage Conditions Keep containers tightly closed in a dry, cool and well-ventilated place.
Incompatible materials Phenol: oxidizers, aluminum chloride, and nitrobenzene, calcium hypochlorite, butadiene, halogens, formaldehyde, mineral oxidizing acids, isocyanates, sodium nitrate, and many other materials. Hot liquid phenol will attack aluminum, magnesium, lead and zinc metals. Methanol: Strong oxidizing agents such as nitrates perchlorates, or sulfuric acid. Will attack some forms of plastics, rubber, and coatings. May react with metallic aluminum and generate hydrogen gas.
### 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

#### Appropriate engineering controls

**Engineering Controls**
- Showers
- Eyewash stations
- Ventilation systems.

**Individual protection measures, such as personal protective equipment**

- **Eye/face protection**: Use chemical safety goggles and/or full face shield. Maintain eye wash fountain and quick-drench facilities in work area.
- **Skin and body protection**: Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.
- **Respiratory protection**: If exposure limits are exceeded or irritation is experienced, NIOSH/MSHA approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required for high airborne contaminant concentrations. Respiratory protection must be provided in accordance with current local regulations.

**General Hygiene Considerations**: Handle in accordance with good industrial hygiene and safety practice.

10. STABILITY AND REACTIVITY

Reactivity
No data available

Chemical stability
Stable under ordinary conditions of use and storage.

Possibility of Hazardous Reactions
None under normal processing.

Hazardous polymerization
Will not occur.

Conditions to avoid
Heat, flames, ignition sources and incompatibles.

Incompatible materials
Phenol: oxidizers, aluminum chloride, and nitrobenzene, calcium hypochlorite, butadiene, halogens, formaldehyde, mineral oxidizing acids, isocyanates, sodium nitrate, and many other materials. Hot liquid phenol will attack aluminum, magnesium, lead and zinc metals. Methanol: Strong oxidizing agents such as nitrates perchlorates, or sulfuric acid. Will attack some forms of plastics, rubber, and coatings. May react with metallic aluminum and generate hydrogen gas.

Hazardous Decomposition Products
Carbon dioxide (CO2). Carbon monoxide. Formaldehyde. May emit toxic fumes under fire conditions.

Information on toxicological effects

Symptoms
The major hazard of phenol is its ability to penetrate the skin rapidly, particularly when liquid, causing severe injury which can be fatal. Phenol also has a strong corrosive effect on the body tissue causing severe chemical burns. Due to its local anesthetizing properties, skin burns may be painless.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Carcinogenicity

6100 - Phenol / Methanol 90/10%

Target Organ Effects
liver, Central nervous system.

Numerical measures of toxicity - Product Information

The following values are calculated based on chapter 3.1 of the GHS document.

12. ECOLOGICAL INFORMATION

This material is expected to be slightly toxic to aquatic life.

Ecotoxicity

Phenol: When released into the soil, this material is expected to readily biodegrade. When released into the soil, this material is not expected to leach into ground water. When released into the soil, this material may evaporate to a moderate extent. When released into the soil, this material is expected to have a half-life between 1 and 10 days. When released into water, this material is expected to biodegrade, not expected to evaporate significantly, and is expected to have a half-life between 10 and 30 days. This material has an estimated bioconcentration factor of less than 100. It is not expected to significantly bioaccumulate. When released into the air, this material is expected to be readily degraded by reaction with photochemically produced hydroxyl radicals. When released into the air, this material is expected to have a half-life of less than one day. Methanol: When released into the soil, this material is expected to leach into groundwater, leach into ground water and to quickly evaporate. When released into water, this material is expected to have a half-life between 1 and 10 days, readily biodegrade, and to exist in the aerosol phase with a short half-life. When released into the air, this material is expected to be readily degraded by reaction with photochemically produced hydroxyl radicals, have a half-life between 10 and 30 days, and be readily removed from the atmosphere by wet deposition.

13. DISPOSAL CONSIDERATIONS

Waste treatment methods

Disposal of wastes

Disposal should be in accordance with applicable regional, national and local laws and regulations. Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste disposal facility.

Contaminated packaging

Do not reuse container.
